Join the Phalanx Project

Andy Lester

Phalanx Project

- Improving module tests

- More tests on CPAN means more testing fodder for Ponie.

- If DBI/TT/Mason/whatever doesn't work on Ponie, then Ponie is worthless.

How we work, v2.0

- Someone will start work on a module, in concert with the module's author.

- People add tests, clean up code, write docs.

- Follow test coverage with Devel::Cover.

How to help

- Join **perl-qa** list at **lists.perl.org**.

- Visit **http://qa.perl.org/phalanx/**

- Let people know you're available.

- Join a project in progress!

What? Me?

- Yes, YOU.

- Join small.

- It's easy to start.

- There is no Cabal.
